Based on a ten-year examination of control systems in over 50 U.S. businesses, this book broadens the definition of control and establishes a critical bridge between the disciplines of strategy and accounting and control. In addition to the more traditional diagnostic control systems, Simons identifies three new control systems that allow strategic change: belief systems that communicate core values and provide inspiration and direction, boundary systems that frame the strategic domain and define the limits of freedom, and interactive systems that provide flexibility in adapting to competitive environments and encourage organizational learning. These four control systems, according to Simons, will

provide managers with the basic levers for pursuing strategic objectives. Performance management is key to the ongoing success of any organisation, allowing it to meet its strategic objectives by designing and implementing management control systems. This book goes beyond the usual discussion of performance management in accounting and finance, to consider strategic management, human behaviour and performance management in different countries and contexts. For an outstanding vision of the frontiers of management research and emerging topics such as the sub-prime crisis and recession this volume is an excellent place to begin. Among other topics, the volume highlights the economic roots of management--the increase in visibility and perceived importance of accounting in the banking sector and how accounting is significant beyond its technical roles.
