Continuation of hearings on proposed changes to administrative provisions of the Revenue Code. Focuses on the taxation of farmers cooperatives, pt.4; Includes "Federal Estate and Gift Taxes. A Proposal for Integration and for Correlation with Income Tax," Advisory Committee to Treas Dept on Estate and Gift Taxation (p. 3798-3973), pt.5. "From adjusted gross income to zoning and property taxes, the second edition of The Encyclopedia of Taxation and Tax Policy offers the best and most complete guide to taxes and tax-related issues. More than 150 tax practitioners and administrators, policymakers, and academics have contributed. The result is a unique and authoritative reference that examines virtually all tax instruments used by governments (individual income, corporate income, sales and value-added, property, estate and gift, franchise, poll, and many variants of these taxes), as well as characteristics of a good tax system, budgetary issues, and many current federal, state, local, and international tax policy issues. The new edition has been completely revised, with 40 new topics and 200 articles reflecting six years of legislative changes. Each essay provides the generalist with a quick and reliable introduction to many topics but also gives tax specialists the benefit of other experts' best thinking, in a manner that makes the complex understandable. Reference lists point the reader to additional sources of information for each topic. The first edition of The Encyclopedia of Taxation and Tax Policy was selected as an Outstanding Academic Book of the Year (1999) by Choice magazine."--Publisher's website.

In its most advanced form, e-commerce allows unidentified purchasers to pay obscure vendors in 'electronic cash' for products that are often goods, services and licenses all rolled into one. This book considers the implications for the domestic and international tax systems of the growth of e-commerce. It covers a wide variety of activities, from discussion of the principles governing direct and indirect taxation, to explanation of the implementation and use of e-commerce on the part of businesses as well as the application of existing tax principles in this field. With its focus on the broader issues surrounding the expansion of e-commerce and its attention to the problems arising internationally in this field, Global Perspectives in E-Commerce Taxation Law will appeal to scholars worldwide.

Introduction to E-commerce discusses the foundations and key aspects of E-commerce while focusing on the latest developments in the E-commerce industry. Practical case studies offer a useful reference for dealing with various issues in E-commerce such as latest applications, management techniques, or psychological methods. Dr. Zheng Qin is currently Director of the E-Commerce Institute of Xi'an Jiaotong University.

commerce, it can be demonstrated to be the most effective solution to date. The book analyzes the application and the effectiveness of traditional income tax principles in contradistinction to VAT principles. Taking into account rapidly ameliorating technology, the book next assesses the compatibility between electronic commerce and diverse systems of taxation. Using case studies of Amazon.com and Second Life as well as additional practical examples, the book demonstrates the effectiveness of VAT in respect of electronic commerce and ameliorating technology in the incalculable and borderless realm of cyberspace.

"As both the leftist political philosopher G.A. Cohen and the conservative economist Milton Friedman have pointed out, equal income is unfair to the hardworking. The ideal tax system--the one used to evaluate actual tax systems--would thus adjust taxation and redistribution for differential labor burdens. Measuring labor burdens, however, is no easy task. Some philosophers and economists attempt to sidestep the measurement problem by invoking envy-freeness. A distribution is envy-free when no one prefers someone else's bundle of goods (or bads) to her own. Yet, eliminating envy in the labor market is not always possible, and minimizing envy when it cannot be eliminated is not always fair. The Solidarity Solution provides an answer: fair labor-income bundles are those that could be justified to free and equal individuals. Part one develops the solidarity solution by showing how rigorous distributive implications can be derived from a relational ideal. Part two uses the solidarity solution to critique the competing theories of fair income distributions of Ronald Dworkin, Philippe Van Parijs, and Marc Fleurbaey. Finally, part three identifies implications for the gender wage gap and taxation"--

Judicial Interpretation of Tax Treaties is a detailed analytical guide to the interpretation of tax treaties at the national level. The book focuses on how domestic courts interpret and apply the OECD Commentary to OECD Model Tax Convention on Income and on Capital. Adopting a global perspective, the book gives a systematic presentation of the main interpretive proposals put forward by the OECD Commentary, and analyses selected cases decided in domestic tax systems in order to assess whether and how such solutions are adopted through national judicial process, and indeed which of these are of most practical value. The book operates on two levels: firstly it sets out a clear and comprehensive framework of tax treaty law, which will be an important tool for any tax practitioner. Secondly, the book provides crucial guidance on issues of tax treaty law as applied at domestic level, such as investment or business income, dispute resolution and administrative cooperation.

Reinventing economic development as if small business mattered In cities and towns across the nation, economic development is at a crossroads. A growing body of evidence has proven that its current cornerstone--incentives to attract and retain large, globally mobile businesses--is a dead end. Even those programs that focus on local business, through buy-local initiatives, for example, depend on ongoing support from government or philanthropy. The entire practice of economic development has become ineffective and unaffordable and is in need of a makeover. The Local Economy Solution suggests an alternative approach in which states and cities nurture a new generation of special kinds of businesses that help local businesses grow. These cutting-edge companies, which Shuman calls "pollinator businesses," are creating jobs and the conditions for future economic growth, and doing so in self-financing ways. Pollinator businesses are especially important to communities that are struggling to lift themselves up in a period of economic austerity, when municipal budgets are being slashed. They also promote locally owned businesses that increase local self-reliance and evince high labor and environmental standards. The book includes nearly two dozen case studies of successful pollinator businesses that are creatively facilitating business and neighborhood improvements, entrepreneurship,

local purchasing, local investing, and profitable business partnerships. Examples include Main Street Genome (which provides invaluable data to improve local business performance), Supportland (which is developing a powerful loyalty card for local businesses), and Fledge (a business accelerator that finances itself through royalty payments). It also shows how the right kinds of public policy can encourage the spread of pollinator businesses at virtually no cost.

In fall 2015, the newly elected Trudeau government endorsed the Paris Agreement and promised to tackle global warming. In 2016, it released a major report which set out a national energy strategy embracing clean growth, technological innovation and carbon pricing. Rather than putting in place tough measures to achieve the Paris targets, however, the government reframed global warming as a market opportunity for Canada's clean technology sector. The Big Stall traces the origins of the government's climate change plan back to the energy sector itself — in particular Big Oil. It shows how, in the last fifteen years, Big Oil has infiltrated provincial and federal governments, academia, media and the non-profit sector to sway government and public opinion on the realities of climate change and what needs to be done about it. Working both behind the scenes and in high-profile networks, Canada's energy companies moved the debate away from discussion of the measures required to create a zero-carbon world and towards market-based solutions that will cut carbon dioxide emissions — but not enough to prevent severe climate impacts. This is how Big Oil and think tanks unraveled the Kyoto Protocol, and how Rachel Notley came to deliver the Business Council of Canada's energy plan. Donald Gutstein explains how and why the door has been left wide open for oil companies to determine their own futures in Canada, and to go on drilling new wells, building new oil sands plants and constructing new pipelines. This book offers the background information readers need to challenge politicians claiming they are taking meaningful action on global warming.
