This book provides a comparative study of fascisms and reactionary nationalisms. It presents these as transnational political cultures and examines the dictatorships and regimes in which these cultures played significant roles. The book is organised into three main sections, focusing on nationalists, fascists and dictatorships in turn. The chapters range across French, Italian, Spanish, Portuguese and German experiences, and include a broader overview of the political cultures in Central and Eastern Europe as well as Latin America. The chapters consider the identities, organizations and evolution of the various cultures and specific political movements, alongside the intersections between these movements and how they adapted to changing contexts. By doing so, the book offers a global view of fascisms and reactionary nationalisms, and promotes debate around these political cultures. The Years of Alienation in Italy offers an interdisciplinary overview of the socio-political, psychological, philosophical, and cultural meanings that the notion of alienation took on in Italy between

the 1960s and the 1970s. It addresses alienation as
a social condition of estrangement caused by the
capitalist system, a pathological state of the mind
and an ontological condition of subjectivity.
Contributors to the edited volume explore the
pervasive influence this multifarious concept had on
literature, cinema, architecture, and photography in
Italy. The collection also theoretically reassesses the
notion of alienation from a novel perspective,
employing Italy as a paradigmatic case study in its
pioneering role in the revolution of mental health
care and factory work during these two decades.
Written over a period of ten years and evincing an
extraordinary range of topics and techniques, this
fourth volume of Caryl Churchill's collected plays
confirms her standing as a playwright who is
'amongst the best half-dozen now writing' (The
Times). The first three were all premiered in 1997.
After the music-theatre piece, Hotel, came three
plays which, as Churchill herself says in her valuable
introduction, all came from a similar mindset: they
explore ways in which theatre can be undermined
from within. This is a Chair is not about what it says
it's about; and the double bill that makes up Blue
Heart consists of a play that never finishes and a
play that's got a virus. Far Away (premiered in 2000)
signals a move towards a powerfully unsettling
combination of disconnectedness and passionate
engagement with big issues: A Number (2002) starts

with a man discovering he's been cloned, and Drunk
Enough to Say I Love You? (2006) looks at the
world's hate-filled love affair with America. The
volume also includes Churchill's version of
Strindberg's A Dream Play, made for the National
Theatre in 2005.

'The Internet is broken and Paolo Bory knows how
we got here. In a powerful book based on original
research, Bory carefully documents the myths,
imaginaries, and ideologies that shaped the material
and cultural history of the Internet. As important as
this book is to understand our shattered digital world,
it is essential for those who would fix it.' — Vincent
Mosco, author of The Smart City in a Digital World
The Internet Myth retraces and challenges the myth
laying at the foundations of the network ideologies –
the idea that networks, by themselves, are the main
agents of social, economic, political and cultural
change. By comparing and integrating different
sources related to network histories, this book
emphasizes how a dominant narrative has
extensively contributed to the construction of the
Internet myth while other visions of the networked
society have been erased from the collective
imaginary. The book decodes, analyzes and
challenges the foundations of the network ideologies
looking at how networks have been imagined,
designed and promoted during the crucial phase of
the 1990s. Three case studies are scrutinized so as

to reveal the complexity of network imaginaries in this decade: the birth of the Web and the mythopoesis of its inventor; and the histories of two Italian networking projects, the infrastructural plan Socrate and the civic network Iperbole, the first to give free Internet access to citizens. The Internet Myth thereby provides a compelling and hidden sociohistorical narrative in order to challenge one of the most powerful myths of our time. This title has been published with the financial assistance of the Fondazione Hilda e Felice Vitali, Lugano, Switzerland.

The book reflects on the issues concerning, on the one hand, the difficulty in feeding an ever- increasing world population and, on the other hand, the need to build new productive systems able to protect the planet from overexploitation. The concept of "food diversity" is a synthesis of diversities: biodiversity of ecological sources of food supply; socio-territorial diversity; and cultural diversity of food traditions. In keeping with this transdisciplinary perspective, the book collects a large number of contributions that examine, firstly the relationships between agrobiodiversity, rural sustainable systems and food diversity; and secondly, the issues concerning typicality (food specialties/food identities), rural development and territorial communities. Lastly, it explores legal questions concerning the regulations aiming to protect both the food diversity and the right

to food, in the light of the political, economic and social implications related to the problem of feeding the world population, while at the same time respecting local communities' rights, especially in the developing countries. The book collects the works of legal scholars, agroecologists, historians and sociologists from around the globe.

Dynamic Learning Networks: Models and Cases in Action represents an attempt to provide a network perspective of organizational learning to drive dynamic competition through extended firm learning processes. This edited volume, contributed by worldwide experts in the field, provides academics and company managers with an extended view of organizational learning networks from real cases and different perspectives. Dynamic Learning Networks: Models and Cases in Action is based on the workshop, Managing Uncertainty and Competition through Dynamic Learning Networks. It was organized by the E-Business Management Section of Scuola Superiore ISUFI – University of Salento (Italy) – and held in Ostuni (Italy) in July 2008. Dynamic Learning Networks: Models and Cases in Action is designed for a professional audience, composed of researchers and practitioners working in corporate learning. This volume is also suitable for advanced-level students in computer science.

The present volume is a Festschrift in honour of the distinguished Byzantinist Costas N. Constantinides.

The title of the volume, Bibliophilos: Books and Learning in the Byzantine World, reflects Professor Constantinides' major contribution to the fields of Greek palaeography, editions of Byzantine texts, Byzantine history, scholarship and education, and Cypriot manuscripts and culture. The volume is introduced by a preface and a tabula gratulatoria dedicated to the honorand, followed by twenty articles, written by seasoned and younger scholars, who are former colleagues and students of Professor Constantinides. These articles, which appear in alphabetical order, offer new material and shed fresh light to the study of Greek manuscripts, binders and scribes, and the life, works and activities of Byzantine scholars, teachers and students, providing editions of unpublished texts, including letters and poems, and exploring various aspects of Byzantine and Cypriot history, literature, art, science and culture. In the process the authors often challenge earlier views and offer new interpretations and insights. Bibliophilos is a book for the student, teacher and scholar of Byzantium in particular, and for every bibliophile in general.

This volume provides a timely and useful introduction to the theory and practical application of image analysis in histology. This powerful research technique can be used to detect not only stored products in a cell (immunocytochemistry) but the synthetic machinery and the genes that control it (in situ hybridisation), as well as

the specific binding sites that act as receptors for a molecule following its release (in vitro autoradiography). The book provides a good introduction for beginners before looking in greater detail at more advanced material in selected areas. The volume highlights the importance of technique in gathering quantitative information. The book is divided into four sections: introductory material, image acquisition, image processing, and applications. The applications areas include quantitative immunochemistry, quantification of nerves and neurotransmitters and automated grain counting in in situ hybridisation histochemistry.

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

Dialogue interpreting includes what is variously referred to in English as Community, Public Service, Liaison, Ad

Hoc or Bilateral Interpreting - the defining characteristic being interpreter-mediated communication in spontaneous face-to-face interaction. Included under this heading are all kinds of professional encounters: police, immigration and welfare services interviews, doctor-patient interviews, business negotiations, political interviews, lawyer-client and courtroom interpreting and so on. Whereas research into conference interpreting is now well established, the investigation of dialogue interpreting as a professional activity is still in its infancy, despite some highly promising publications in recent years. This special issue of The Translator, guest-edited by one of the leading scholars in translation studies, provides a forum for bringing together separate strands within this developing field and should create an impetus for further research. Viewing the interpreter as a gatekeeper, coordinator and negotiator of meanings within a three-way interaction, the descriptive studies included in this volume focus on issues such as role-conflict, in-group loyalties, participation status, relevance and the negotiation of face, thus linking the observation of interpreting practice to pragmatic constraints such as power, distance and face-threat and to semiotic constraints such as genres and discourses as socio-textual practices of particular cultural communities. In the World of the Second Sophistic, education, paideia, was a crucial factor in the discourse of power. Knowledge in the fields of medicine, history, philosophy, and poetry joined with rhetorical brilliance and a presentable manner became the outward appearance of the elite of the Eastern Roman Empire. This outward

appearance guaranteed a high social status as well as political and economical power for the individual and major advantages for their hometowns in interpolis competition. Since paideia was related particularly to Classical Greek antiquity, it was, at the same time, fundamental to the new self-confidence of the Greek East. This book presents, for the first time, studies from a broad range of disciplines on various fields of life and on different media, in which this ideology became manifest. These contributions show that the Sophists and their texts were only the most prominent exponents of a system of thoughts and values structuring the life of the elite in general.

This book highlights scientific achievements in the key areas of sustainable electricity generation and green building technologies, as presented in the vital bi-annual World Renewable Energy Network's Med Green Forum. Renewable energy applications in power generation and sustainable development have particular importance in the Mediterranean region, with its rich natural resources and conducive climate, making it a perfect showcase to illustrate the viability of using renewable energy to satisfy all energy needs. The papers included in this work describe enabling policies and offer pathways to further develop a broad range of renewable energy technologies and applications in all sectors – for electricity production, heating and cooling, agricultural applications, water desalination, industrial applications and for the transport sector.

Religious ideas, practices, discourses, institutions, and social expressions are in constant flux. This volume

addresses the internal and external dynamics, interactions between individuals, religious communities, and local as well as global society. The contributions concentrate on four areas: 1. Contemporary religion in the public sphere: The Tactics of (In)visibility among Religious Communities in Europe; Religion Intersecting De-nationalization and Re-nationalization in Post-Apartheid South Africa; 2. Religious transformations: Forms of Religious Communities in Global Society; Political Contributions of Ancestral Cosmologies and the Decolonization of Religious Beliefs; Esoteric Tradition as Poetic Invention; 3. Focus on the individual: Religion and Life Trajectories of Islamists; Angels, Animals and Religious Change in Antiquity and Today; Gaining Access to the Radically Unfamiliar in Today's Religion; Religion between Individuals and Collectives; 4. Narrating religion: Entangled Knowledge Cultures and the Creation of Religions in Mongolia and Europe; Global Intellectual History and the Dynamics of Religion; On Representing Judaism.

Learn the language of la dolce vita! For anyone who wants to learn and enjoy the most expressive and romantic of languages, the third edition of 'The Complete Idiot's Guide to Learning Italian' is the first choice for a whole new generation of enthusiastic students of Italian. This updated edition includes two new quick references on verbs, grammar, and sentence structure; two new appendixes on Italian synonyms and popular idiomatic phrases; and updated business and money sections. First two editions have sold extraordinariy well. Italian is the fourth most popular language in the United States.

This volume collects the best scientific contribution presented in the 3rd World Conference on Terraced Landscapes held in Italy from 6th to 15th October 2016, offering a deep and multifaceted insight into the remarkable heritage of terraced landscapes in Italy, in Europe and in the World (America, Asia, Australia). It consists of 2 parts: a geographical overview on some of the most important terraced systems in the world (1st part), and a multidisciplinary approach that aims to promote a multifunctional vision of terraces, underlining how these landscapes meet different needs: cultural and historical values, environmental and hydrogeological functions, quality and variety of food, community empowerment and sustainable development (2nd part). The volume offers a great overview on strengths, weaknesses, functions and strategies for terraced landscapes all over the world, summarizing in a final manifest the guidelines to provide a future for these landscapes as natural and cultural heritage.

In Byblos in the Late Bronze Age, Marwan Kilani reconstructs the "biography" of the city of Byblos during the Late Bronze Age, exploring its interactions and development in relation with the contemporary local and macroregional cultural and geopolitical reality.

The building of religious structures represents a rare opportunity for the architect to concentrate on the creation of volume, space, and form. Sacred architecture is far less determined than other building tasks by functional requirements, norms, and standards. As a rule, it is free to unfold as pure architecture. Thus in design terms this building task offers enormous freedoms to the architect. At the same time, however, the special atmospherics of sacred spaces call, on the part of the architect, for a highly sensitive treatment of religion and the relevant cultural and architectural traditions. In a systematic section, this volume

introduces the design, technical, and planning fundamentals of building churches, synagogues, and mosques. In its project section, it also presents about seventy realized structures from the last three decades. Drawing upon his in-depth knowledge of the subject and his many years of publishing experience, the author offers a valuable analysis of the conceptual and formal aspects that combine to create the religious impact of spaces (e.g., the ground plan, the shapes of the spaces, the incidence of light, and materiality).
In the course of Europe's twentieth century, freedoms were won at the cost of terrible sacrifice. The physical remains of war, conflict and ideological struggle lie everywhere around us. The question of what to do with this common past, in which we all share an interest, lies at the centre of this important book. From a variety of professional backgrounds, the contributors consider a wide range of conflict-heritage sites in the context of international and national histories and regional and local historical narratives. Questions of who 'owns' the past, the ambiguities over how people identify with the local community or nation state, and whether or how to make moral judgements, are central. The book illustrates the challenges of documenting and describing what are often extensive, contested and sometimes enigmatic and ambiguous buildings and monuments. The priorities of conservation, and how we ensure that documents, artefacts, sites and buildings can be given adequate and appropriate protection and care, are also addressed.
The contemporary economic landscape features the prevalence of the service sector in economic systems, the pervasive servitisation of manufacturing, innovations in traditional business models and new value creation models, thanks to the new possibilities offered by the web, ICT and other enabling technologies. In this evolving context, this book provides qualified contributions on the topic of service

science from a managerial perspective. A multidisciplinary perspective is adopted, dealing with both the structural–technological and dynamic–relational aspects of managing complexity. In addressing the contribution that service science can make to business value creation, this book covers relevant issues such as product servitisation, business modelling, value cocreation with customers, performance measures and the role of ICT. It also presents some innovative experiences of management models in service organisations operating in the environmental, energy and health-care sectors. This book aims to enhance the value of the results of research intertwined with the development of a new training curriculum started four years ago at the Scuola Superiore Sant'Anna of Pisa (Italy) with the evolution of the "Master in Management of Innovation" into the new "Master in Management, Innovation and Service Engineering" (MAINS). Europe's boundaries have mainly been shaped by cultural, religious, and political conceptions rather than by geography. This volume of bilingual essays from renowned European scholars outlines the transformation of Europe's boundaries from the fall of the ancient world to the age of decolonization, or the end of the explicit endeavor to "Europeanize" the world.From the decline of the Roman Empire to the polycentrism of today's world, the essays span such aspects as the confrontation of Christian Europe with Islam and the changing role of the Mediterranean from "mare nostrum" to a frontier between nations. Scandinavia, eastern Europe and the Atlantic are also analyzed as boundaries in the context of exploration, migratory movements, cultural exchanges, and war. The Boundaries of Europe, edited by Pietro Rossi, is the first installment in the ALLEA book series Discourses on Intellectual Europe, which seeks to explore the question of an intrinsic or quintessential European identity in light of the rising skepticism towards Europe as an integrated cultural

and intellectual region.

This book highlights selected papers presented during the bi-
annual World Renewable Energy Network's 2019 Med Green
Forum. This international forum highlights the importance of
growing renewable energy applications in two main sectors:
Electricity Generation and Sustainable Building. The papers
highlight the most current research and technological
breakthroughs illustrating the viability of using renewable
energy to satisfy energy needs. Coverage includes a broad
range of renewable energy technologies and applications in
all sectors – electricity production, heating and cooling,
agricultural applications, water desalination, industrial
applications, and transport. Presents leading-edge research
in green building, sustainable architecture, and renewable
energy; Covers a broad range of renewable energy
technologies and applications in all sectors; Contains case
studies and examples to enhance practical application of the
technologies presented.

Building on their studies of sixties culture and theory of
cognitive praxis, Ron Eyerman and Andrew Jamison
examine the mobilization of cultural traditions and
formulation of new collective identities through the music
of activism. They combine a sophisticated theoretical
argument with historical-empirical studies of nineteenth-
century populists and twentieth-century labour and ethnic
movements, focusing on the interrelations between
music and social movements in the United States and
the transfer of those experiences to Europe. Specific
chapters examine folk and country music, black music,
music of the 1960s movements, and music of the
Swedish progressive movement. This highly readable
book is among the first to link the political sociology of

social movements to cultural theory.

Assistive Technology Assessment Handbook, Second Edition, proposes an international ideal model for the assistive technology assessment process, outlining how this model can be applied in practice to re-conceptualize the phases of an assistive technology delivery system according to the biopsychosocial model of disability. The model provides reference guidelines for evidence-based practice, guiding both public and private centers that wish to compare, evaluate, and improve their ability to match a person with the correct technology model. This second edition also offers a contribution to the Global Cooperation on Assistive Technology (GATE) initiative, whose activities are strongly focused on the assistive products service delivery model. Organized into three parts, the handbook: gives readers a toolkit for performing assessments; describes the roles of the assessment team members, among them the new profession of psychotechnologist; and reviews technologies for rehabilitation and independent living, including brain–computer interfaces, exoskeletons, and technologies for music therapy. Edited by Stefano Federici and Marcia J. Scherer, this cross-cultural handbook includes contributions from leading experts across five continents, offering a framework for future practice and research.

This book gathers the latest advances, innovations, and applications in the field of innovative biosystems engineering for sustainable agriculture, forestry and food production. Focusing on the challenges of implementing sustainability in various contexts in the fields of

biosystems engineering, it shows how the research has addressed the sustainable use of renewable and non-renewable resources. It also presents possible solutions to help achieve sustainable production. The Mid-Term Conference of the Italian Association of Agricultural Engineering (AIIA) is part of a series of conferences, seminars and meetings that the AIIA organizes, together with other public and private stakeholders, to promote the creation and dissemination of new knowledge in the sector. The contributions included in the book were selected by means of a rigorous peer-review process, and offer an extensive and multidisciplinary overview of interesting solutions in the field of innovative biosystems engineering for sustainable agriculture.

This book showcases cutting-edge research papers from the 5th International Conference on Research into Design – the largest in India in this area – written by eminent researchers from across the world on design process, technologies, methods and tools, and their impact on innovation, for supporting design across boundaries. The special features of the book are the variety of insights into the product and system innovation process, and the host of methods and tools from all major areas of design research for the enhancement of the innovation process. The main benefit of the book for researchers in various areas of design and innovation are access to the latest quality research in this area, with the largest collection of research from India. For practitioners and educators, it is exposure to an empirically validated suite of theories, models, methods and tools that can be taught and practiced for design-led

innovation.

This open access book brings together discourse on children and peace from the 15th International Symposium on the Contributions of Psychology to Peace, covering issues pertinent to children and peace and approaches to making their world safer, fairer and more sustainable. The book is divided into nine sections that examine traditional themes (social construction and deconstruction of diversity, intergenerational transitions and memories of war, and multiculturalism), as well as contemporary issues such as Europe's "migration crisis", radicalization and violent extremism, and violence in families, schools and communities. Chapters contextualize each issue within specific social ecological frameworks in order to reflect on the multiplicity of influences that affect different outcomes and to discuss how the findings can be applied in different contexts. The volume also provides solutions and hope through its focus on youth empowerment and peacebuilding programs for children and families. This forward-thinking volume offers a multitude of views, approaches, and strategies for research and activism drawn from peace psychology scholars and United Nations researchers and practitioners. This book's multi-layered emphasis on context, structural determinants of peace and conflict, and use of research for action towards social cohesion for children and youth has not been brought together in other peace psychology literature to the same extent. Children and Peace: From Research to Action will be a useful resource for peace psychology academics and students, as well as social and developmental

psychology academics and students, peace and development practitioners and activists, policy makers who need to make decisions about the matters covered in the book, child rights advocates and members of multilateral organizations such as the UN.

The book is the final report of the researches, discussions, conversations around and about the Project PRIN Employability & Competences which took place on March 9th-?11th, 2017 within an International Conference at the University of Florence. It was the final event of the project PRIN2012LATR9N which aims were: «to design innovative programs for higher education, to promote personalized and learner-centered teaching and learning, to build on job competencies, to value talents to create new work opportunities, to support young adults during their employment emergency, as a response to socio economic crisis and as a citizenship action». The research activities concerned the main phases of the students' academic life: career guidance upon entry, personalized teaching, career calling, professional vocation, profession building activities such as internships and work related experiences, and lastly job placement.

The invention of collage by Picasso and Braque in 1912 proved to be a dramatic turning point in the development of Cubism and Futurism and ultimately one of the most significant innovations in twentieth-century art. Collage has traditionally been viewed as a new expression of modernism, one allied with modernism's search for purity of means, anti-illusionism, unity, and autonomy of form. This book - the first comprehensive study of collage and

its relation to modernism - challenges this view. Christine
Poggi argues that collage did not become a new
language of modernism but a new language with which
to critique modernism. She focuses on the ways Cubist
collage - and the Futurist multimedia work that was
inspired by it - undermined prevailing notions of material
and stylistic unity, subverted the role of the frame and
pictorial ground, and brought the languages of high and
low culture into a new relationship of exchange.

This book has been considered by academicians and
scholars of great significance and value to literature. This
forms a part of the knowledge base for future generations. So
that the book is never forgotten we have represented this
book in a print format as the same form as it was originally
first published. Hence any marks or annotations seen are left
intentionally to preserve its true nature.

I chatbot, programmi robot in grado di interfacciarsi con gli
utenti e svolgere operazioni in autonomia, sono la nuova
frontiera delle applicazioni software e sono sempre più diffusi
nei reparti commerciali, di marketing e nel customer care.
Questo manuale mostra come utilizzare Node.js per costruire
interfacce conversazionali e bot in grado di automatizzare
processi di lavoro e comunicazioni. Viene spiegato come
elaborare il linguaggio naturale per consentire alle macchine
di individuare le intenzioni di un utente e rispondere nella
maniera più appropriata. Le applicazioni utilizzano strumenti
come Slack, Twitter, Facebook Messenger, Skype ma anche
email e SMS, e spaziano tra il servizio clienti,
l'organizzazione di documenti e dati, la pianificazione di
riunioni, l'invio di report, il tracciamento di bug e anomalie
software. L'obiettivo finale è imparare a valutare quali benefici
un bot ben configurato può portare in un'organizzazione.

The accelerated pace of European integration since the early

1990s has been accompanied by the emergence of increasingly prominent and multiform oppositions to the process. The term Euroscepticism has appeared with growing frequency in a range of political, media, and academic discourses. Yet, the label is applied to a wide range of different, and occasionally contradictory, phenomena. Although originally associated with an English exceptionalism relative to a Continental project of political and economic integration, the term Euroscepticism is now also identified with a more general questioning of European Union institutions and policies which finds diverse expressions across the entire continent. This volume of European Studies brings together an interdisciplinary team of contributors to provide one of the first major, multinational surveys of the growth of these Eurosceptic tendencies. Individual chapters provide detailed examinations of developments in France, Germany, the Netherlands, the United Kingdom, Ireland, Sweden, Austria, the Czech Republic, Poland, and Switzerland. Overall, the volume draws a distinctive portrait of contemporary Euroscepticism, situating the phenomenon not only relative to the progress of European integration, but also in relation to broader questions concerned with the evolution of party politics and the reshaping of national identities. Costruire bot con Node.js.
