

Determination Of Iron In Ore By Redox Titration Chemistry

Includes the institute's Proceedings.

The go-to resource for professionals in the mining industry. The SME Mining Reference Handbook was the first concise reference published in the mining field and it quickly became the industry standard. It sits on almost every mining engineer's desk or bookshelf with worn pages, tabs to find most used equations, and personal notes. It has been the unequaled single reference and the first source of information for countless engineers. This second edition of the SME Mining Reference Handbook builds on that success. With an enhanced presentation, new and updated information is represented in a concise, well-organized guide of important data for everyday use by engineers and other professionals engaged in mining, exploration, mineral processing, and environmental compliance and reclamation. With its exhaustive trove of charts, graphs, tables, equations, and guidelines, the handbook is the essential technical reference for mobile mining professionals. With its exhaustive trove of charts, graphs, tables, equations, and guidelines, the handbook is the essential technical reference for mobile mining professionals. Iron ores, Metalliferous minerals, Swelling, Swelling

standards).
This part of GB/T 6730 specifies the method for determining
the total iron content in iron ore by automatic potentiometric
titration. ? This section applies to natural iron ore, iron
concentrates and agglomerates with copper, vanadium and
manganese content of less than 0.1%, respectively, including
the determination of total iron content in sintered products.
Measuring range (mass fraction): 40% to 70%.

The precision and accuracy of three analytical methods for the determination of total iron in iron ores by mercury pollutionfree redoximetry have been estimated from the data resulting from international tests conducted during the period of 1982/84. These international tests involved the participation of 35 laboratories from 10 countries using four iron ore samples containing 45-67% iron.
