A decade has passed since the Asian crisis of 1997-1998 which decimated many of the regional economies. While the crisis itself led to severe economic and political consequences, its primary cause was an inappropriate mix of policies, as regional economies attempted to simultaneously maintain fairly rigid exchange rates (soft US dollar pegs) and monetary policy autonomy in the presence of large-scale capital outflows. The chapters in this volume focus on selected exchange

Managerial economics refers to the application of economic theory and the tools of analysis of decision science to examine how a firm can make optimal managerial decision in the face of the constraints it faces. This is a text for the standard upper-level undergraduate and graduate course in managerial economics offered in most business and some economics programs. This text uses the theory of the firm to integrate and link economic theory, decision sciences, and the functional areas of business and shows how all of these topics are crucial components of managerial decision making. To this fourth edition were added many new sections and twenty-eight new 'case studies'. International Economics, 13th Edition provides students with a comprehensive, up-to-date review of the field's essential principles and theory. The text uniquely employs the same graphical and numerical model in chapters that cover the same basic concept, allowing students to recognize the relationship among the different topics without having to start with a new example each time. Clear, straightforward discussions of each key concept and theory are complemented by concrete, accessible, and relatable examples that serve to strengthen student comprehension and retention.
