This is the second edition of an old favourite written for all students of radiography at all levels of interest. The book includes descriptions of projection radiographic techniques combined with an outline of the more common or noteworthy associated trauma and pathology. Each projection is numbered and cross-referenced; a useful table of projections is included at the beginning of each chapter. Skeletal Radiography provides a good introduction to the medical terminology encountered in radiographic practice. Content has been expanded and updated to take into account the latest guidelines from the Royal College of Radiologists, changes in treatments and other medical knowledge. Some new projections have been added, others removed and a few (notably in the skull chapters) have been retained for historical interest.

This sports medicine handbook is the only resource of its kind, created specifically for the emergency medicine provider.

Trauma is a serious public health problem worldwide and is the leading cause of death among adults and children. Physiotherapists play a key role in the interdisciplinary team caring for patients with physical injury after a traumatic event. *Cardiopulmonary Physiotherapy in Trauma* offers valuable insight into the advanced trauma life support and acute care management of patients with trauma-related injuries, as well as physiotherapy treatment aims, intervention strategies and precautions to treatment. A variety of topics related to trauma are brought together in this practical volume, which shares information obtained from published research as well as the extensive clinical expertise of the authors. The dissemination of the authors' personal experience is key in cases where evidence to support the use of certain treatment techniques in patients with traumatic injury is still lacking. The book is thus an essential reference that encourages evidence-based practice for advanced undergraduate students, as well as graduate physiotherapists who work with trauma patients in the acute care setting. Contents: Physiological Response to Trauma (H van Aswegen)Not Just 'Small Adults': Paediatric Anatomy and Physiology in Relation to Trauma (B M Morrow)Trauma and Immunosuppressive Diseases (H van Aswegen and B M Morrow)Physiotherapy Modalities, Markers and Outcome Measures (B M Morrow and H van Aswegen)Blunt and Penetrating Injuries (H van Aswegen, B M Morrow and E van Aswegen)Burn Injuries (S Hanekom, M Wilson, B M Morrow and H van Aswegen)Multiple Orthopaedic Injuries (N Plani, H van Aswegen and B M Morrow)Spinal Cord Injury (W Mudzi, H van Aswegen and B M Morrow)Traumatic Brain Injury (R Roos, B M Morrow and H van Aswegen)Quality of Life of Survivors of Trauma (H van Aswegen) Readership: Physiotherapists who work in the acute care setting and manage adult and paediatric patients with traumatic injuries; Physiotherapy students studying towards Master of Science qualification (the topic is covered in the final two years of u/g cardiopulmonary physiotherapy courses); Researchers with an interest in rehabilitation of patients with traumatic injury in the acute care setting or after discharge from acute care setting. Undergraduate physiotherapy students for subjects related to cardiopulmonary physiotherapy treatment techniques, physiotherapy in critical care, traumatology and orthopaedics, graduate nurses, doctors and allied health practitioners may gain a better understanding of the role of a physiotherapist, as a member of the interdisciplinary team in the acute care setting, in the management of patients with traumatic injuries. Key Features:Written by expert physiotherapists for physiotherapistsProvides more detailed information on the advanced trauma life support, surgical and intensive care unit management of patients with various types of traumatic injury compared with information found in other cardiopulmonary physiotherapy textbooksProvides evidence-based information on the physiotherapy management of both adult and paediatric patients with traumatic injury in the acute care settingExtensive pedagogical features make this text easily digestible and accessible for undergraduates and new practitioners on the go i.e., 'key message' boxes and clinical case scenariosExercise therapy strategies for the rehabilitation of patients with traumatic injury in the acute care setting and after hospital discharge are also providedThe only truly comprehensive & pedagogical textbook on the topicInternational market — should be the book recommended in the UK and abroad (editors are based in South Africa)Keywords:Trauma;Cardiopulmonary;Physiotherapy;Injury;Rehabilitation

This book fills a gap in providing specialist information on orthopaedics and trauma occupational therapy. Its contributors bring together information on the aetiology, surgical input and the occupational therapy intervention appropriate to this client group. It is divided into two main sections, the first being orthopaedics and the second orthopaedic trauma. The first part is further subdivided to cover lower limb surgery, upper limb surgery, spinal conditions, and paediatric orthopaedic conditions. In Part two, principles of fracture management are covered, followed by pelvic and acetabular reconstruction, hand injuries and traumatic amputation.
