Advances in technology and biomaterials have dramatically expanded the possibilities for esthetic optimization in restorative dentistry. Too often, however, such treatment focuses exclusively on the dental area and fails to consider the overall facial composition. This easy-to-read text provides the clinician with a systematic approach to facial evaluation during esthetic treatment planning. Separate chapters guide the reader to an understanding of the esthetic parameters involved in facial, dentolabial, phonetic, dental, and gingival analysis. Each chapter presents prosthetic considerations and applications that allow the clinician to formulate an optimal treatment plan based on the individual clinical situation of the patient. Also provided is an esthetic checklist that allows the clinician to apply the principles described in the text to everyday practice.

Vols. for 1871-76, 1913-14 include an extra number, The Christmas bookseller, separately paged and not included in the consecutive numbering of the regular series.

Voice Rehabilitation: Testing Hypotheses and Reframing Therapy is a specific guide for beginning speech-language pathology student clinicians to develop a hierarchy of goals and procedures related to the therapeutic process. This text is written from the students perspective and it addresses the questions that students consistently ask when they begin their first internship. Features: Chapter Objectives, Case Studies, Voice Evaluation Forms

This work provides a case-oriented approach to treatment planning, bridging the gap between conventional textbooks of prosthodontics and basic manuals of denture design. It is divided into two parts. The first reviews basic principles of treatment planning and partial denture designs, and is supported by numerous line diagrams, checklists, questions and summaries which highlight key points. Part Two comprises 14 complete case histories, putting into practice the theory

outlined in Part One. For each, the history leads to a series of possible treatment options, based on the patient's needs and the dentist's appraisal of their practicality. Each case is illustrated with casts of the patient's existing dentition, radiographs and results of other investigations such as sialography and CT scans. From these a treatment plan is devised and a denture constructed. In some of the cases, design errors' are also included for discussion.
