Landscaping The Guide To Landscaping Lawn Care And Creating A Beautiful Lawn Landscaping 101 Lawn Care

Half how-to and half idea guide, this book offers idiot-proof steps to beautiful landscaping. 400+ photos & illustrations.

Pennsylvania Naturally describes all the habitat types, all the soils and all the native plants -- but it's also a toolkit of knowledge about geography, geology and ecology especially for gardeners. It provides dozens of starter lists to use as foundations for design and includes the perfect list of plants for rain gardens. The book describes sustainable landscaping as much more than environmental responsibility. Gardens are more lush, more productive, easier to maintain and less expensive. Instead of controlling the land, we collaborate with it to design a garden that suits our taste and give us pleasure. Gorgeous gardens are possible on any scale, no matter what our resources - and we contribute to the health of the planet. Instead of trial-and-error, we plan, design and create landscapes with confidence and success. For the first time, we can garden with certainty about our soil, the habitat we have, the plants that will work. Along the way, we broaden our horizons about the astonishing variety

This book is a quick and easy-to-use reference guide for choosing plant material for landscape designs. This reference manual includes comprehensive lists with search criteria for each of the major plant groups, including trees, shrubs, groundcovers, perennials, vines, grasses, and ferns. These plant groups contain hundreds of specific species, varieties, and cultivars that are readily available in the marketplace from the major production nurseries. Landscape architects, designers, contractors, or anyone who designs with plants, can easily choose plants that will work on their site. The book is technical enough for the professional, yet simple

enough to be used by the layperson. Both botanical and common names are used and an extensive amount of cultural and environmental information is presented. While many other books of this kind give only basic information such as sun/shade, height/width, there are so many as 30 specific categories for each plant group. The categories cover such important criteria as light and soil requirements, zone hardiness, height and width, pest and disease susceptibility, urban tolerance, and tolerance to salt and drought. The lists also include many criteria often overlooked such as growth rates, overall messiness, root systems, minimal fall clean up, maintenance levels, soil PH and landscape value/use, and many visual characteristics such as texture, foliage color and fall colors, bloom colors and seasons, shapes and forms, attractive bark and foliage and more. There is also a candid Pros & Cons section covering some realistic considerations for each of the plant species groups.
