Once only associated with North America and Europe, formal athletic events are now becoming more prevalent in Asia as well. With the expansion of this industry, there is a need for efficient and strategic advertising to promote competitions, events, and teams. *Emerging Trends and Innovation in Sports Marketing and Management in Asia* brings together research and case studies to evaluate and discuss the effectiveness of current methodologies and theories in an effort to improve promotional activities and the organization of all aspects of the sports industry. This publication is an essential reference source for academicians, researchers, industry practitioners, and upper-level students interested in the theories and practices of sports marketing and management with a special focus on Asia.

The first English-language work on Korea's unique experiences with telecommunications, this book focuses on Korea's distinct political, economic, legal, socio-cultural and personal dimensions. It includes chapters on the relationship between political liberalization and telecommunications, education and public promotion of the information society, together with the role of new technologies in the reunification of Korea.

From the Oscar-winning blockbusters *American Beauty* and *Shakespeare in Love* to Sundance oddities like *American Movie* and *The Tao of Steve*, to foreign films such as *All About My Mother*, the latest volume in this popular series features a chronological collection of facsimiles of every film review and awards article published in *The New York Times* between January 1999 and December 2000. Includes a full index of personal names, titles, and corporate names. This collection is an invaluable resource for all libraries.

What are the secrets of successful teams? Why do some teams achieve remarkable success while others fail or are consigned to mediocrity? To find the answers, Carl E. Larson and Frank M. J. LaFasto conducted a three-year study of teams and team achievement. Interviewing a wide range of teams, including the space shuttle Challenger investigation team, executive management teams and a championship football team, Larson and LaFasto discovered a surprising consistency in the characteristics of effective teams. In *Teamwork*, they explore the eight properties of successful teams: a clear, elevating goal; a results-driven structure; competent team members; unified commitment; collaborative climate; standards of excellence; external support and recognition; and principled leadership. A final chapter examines the priority of the steps that lead to the building of a high performance team. The authors strive to make the concepts concrete, coupling solid theory with straightforward, practical advice on how to apply it and with lively, fascinating anecdotes. The volume will appeal to practitioners, scholars, and advanced students in the areas of organization studies and management, as well as interpersonal communication.

This edition is updated to include new research and clinical material for practitioners working with mental health patients of diverse backgrounds. Written by experts in cultural sensitivity, the text begins by establishing innovative approaches to understanding diversity, tools for diversity educational training for health care providers, clinical interviewing techniques and effective strategies in having difficult conversations. Indirect approaches to understanding diversity and mental health come from unique chapters that range from the ways that journalists process and discuss mental health competency to the business model for cultural competency in health care. The second section of the book moves from the broader subjects to the needs of specific populations, including Native Americans, Latinos, Asians, African American, Middle Eastern, Refugee and LGBTQ communities. The discussion includes understanding the complexities of making mental health diagnoses and the various meanings these diagnoses have for the socio-cultural group described. Each chapter also details biopsychosocial treatment options and challenges. The Massachusetts General Hospital Textbook on Diversity and Cultural Sensitivity in Mental Health, Second Edition, is an excellent resource for all clinicians working with diverse populations, including psychiatrists, primary care physicians, emergency room physicians, early career physicians and trainees, psychologists, nurses, social workers, researchers, and medical educators.

'Joanne Larson and Jackie Marsh's Literacy Learning is easily the most theoretically sophisticated and practically useful discussion of sociocultural and critical approaches to literacy learning that has appeared to date' - James Paul Gee, Tashia Morgidge Professor of Reading, University of Wisconsin-Madison Making Literacy Real is the essential reference text for primary education students at undergraduate and graduate level who want to understand literacy theory and successfully apply it in the classroom. Doctoral students will find this a useful resource in understanding the relationship of theory to practice. The authors explore the breadth of this complex and important field, orientating literacy as a social practice, grounded in social, cultural, historical and political contexts of use. They also present a detailed and accessible discussion of the theory and its application in the primary classroom.

This book provides a comprehensive overview of the process of building healthy early social and emotional relationships with infants from a developmental perspective. The book synthesizes current research on the contextual influences of attachment, family relationships, and caregiving practices on social-emotional development. Chapters examine the processes of socioemotional development—particularly in relationships with parents, other family members, and peers—and identify areas for promoting healthy attachments and resilience, improving caregiving skills, and intervening in traumatic and stressful situations. Chapters also present empirically-supported intervention and prevention programs focused on building early relationships from birth through three years of age. The book concludes with future directions for supporting infant mental health and its vital importance as a component of research, clinical and educational practice, and child and family policy. Topics featured in this book include: The effect of prenatal and neonatal attachment on social and emotional development. The impact of primary relationships and early experiences in toddlerhood. Toddler autonomy and peer awareness in the context of families and child care. Supporting early social and emotional relationships through The Legacy for Children™ Intervention. How to build

early relationship programming across various cultures. *Building Early Social and Emotional Relationships with Infants and Toddlers* is a must-have reference for researchers, clinicians and professionals, and graduate students in the fields of infant mental health, developmental psychology, pediatrics, public health, family studies, and early childhood education.

Now available in a newly revised and updated edition, Larson's highly-acclaimed study of the debate over teaching evolution in the public schools ranges from the Scopes trial of 1925 to the creationism disputes of the 1980s.

The Cambridge Handbooks on Construction Robotics discuss progress in robot systems theory and demonstrate their integration using real systematic applications and projections for offsite as well as onsite building production. The series is intended to give professionals, researchers, lecturers, and students conceptual and technical skills and implementation strategies to manage, research or teach the implementation of advanced automation and robot-technology-based processes in construction. *Robot-Oriented Design* introduces the design, innovation and management methodologies that are key to the realization and implementation of the advanced concepts and technologies presented in the subsequent volumes. This book describes the efficient deployment of advanced construction and building technology. It is concerned with the coadaptation of construction products, processes, organization and management, and with automated/robotic technology, so that the implementation of modern technology becomes easier and more efficient. It is also concerned with technology and innovation management methodologies and the generation of life cycle-oriented views related to the use of advanced technologies in construction.

Incorporating recent archaeological discoveries and scholarly perspectives, Jennifer Larson explores the variety of cults celebrated by the Greeks, how these cults differed geographically, and how each deity was conceptualized in local cult titles and rituals. This volume will serve as a companion to the many introductions to Greek mythology, showing a side of the Greek gods to which most students are rarely exposed. Surveying ancient Greek religion through the cults of its gods and goddesses, heroes and heroines, *Ancient Greek Cults: A Guide* is detailed enough to be used as a quick reference tool or text, yet provides a readable account focusing on the oldest, most widespread, and most interesting religious practices of the ancient Greek world in the Archaic and Classical periods. Including an introductory chapter on sources and methods, and suggestions for further reading, this book will allow readers to gain a fresh perspective on Greek religion.

The processing and supply of fish products is a huge global business. Like other sectors of the food industry it depends on providing products which are both safe and which meet consumers' increasingly demanding requirements for quality. With its distinguished editor and international team of contributors, *Safety and quality issues in fish processing* addresses these two central questions. Part one looks at ways of ensuring safe products. There are 3 chapters on the key issue of applying HACCP systems in an increasingly international supply chain. These are complemented by chapters on identifying and controlling key hazards from pathogens and allergens to heavy metals, parasites and toxins. Part two contains a range of contributions analysing various aspects of fish quality. Two introductory chapters consider how concepts such as quality, freshness and shelf-life may be defined. This chapter provides a context for chapters on modelling and predicting shelf-life, key enzymatic influences on postmortem fish colour, flavour and texture, and the impact of lipid oxidation on shelf-life. Part three of the book looks at ways of improving quality through the supply chain. An initial chapter sets the scene by looking at ways of creating an integrated quality chain. There are then a series of chapters on key processing and preservation technologies ranging from traditional fish drying to high

pressure processing. These are followed by a discussion of methods of storage, particularly in maintaining the quality of frozen fish. Two final chapters complete the book by looking at fish byproducts and the issue of species identification in processed seafood. As authoritative as it is comprehensive, *Safety and quality issues in fish processing* is a standard work on defining, measuring and improving the safety and quality of fish products. Addresses how to provide fish products which are safe and also meet consumers' increasingly demanding requirements for quality Examines ways of ensuring safe products, from the application of HACCP systems in an international supply chain to the identification and control of hazards from pathogens, allergens, heavy metals, parasites and toxins Outlines how to identify and control hazards, from pathogens and allergens to heavy metals, parasites and toxins

This comprehensive reference thoroughly discusses the objective and subjective determination of disability. Organized by region/system, it includes pathological conditions and common occupationally related injuries, methods of physical examination, radiographic testing and interpretation, disability ratings, and work rating information. Also includes information on working with allied professions. A Brandon Hill Title

Companies traded over the counter or on regional conferences.

Describes the outphasing approach to amplifier linearization that uses power-combining techniques to create a linear output waveform from two nonlinear input sources, and presents recent advances in resolving the limitations caused by the strict matching requirements between the two amplifiers and the microwave power wasted in the power-combining network. The authors discuss the linearity performance of outphasing amplifier systems, correction schemes based on training vectors, and power recycling in outphasing amplifiers. Zhang is an engineer with Qualcomm, while Larson and Asbeck are affiliated with the University of California, San Diego. Annotation (c)2003 Book News, Inc., Portland, OR (booknews.com).

An immensely useful manual with many attractive features: comprehensive and lucid keys, precise diagrams, annotated checklists and up-to-date references. ... there is no doubt that it should be seen as an example of the type of manual which is so badly needed in the study of the fauna of many shores around the world.--*Journal of Animal Ecology* Congratulations to the editors, contributors, and publisher for a job well done. The third edition has been rewritten, corrected, and enlarged, so that while retaining the basic organization of the earlier ones, it is more useful, informative and up-to-date. The meticulous scholarship of Smith and Carlton is just what the revision needed.--*Systematic Zoology* This revision should serve for many years. It is therefore particularly commendable that the editing has been meticulous, perhaps flawless. ... thanks are due to the many contributors for a job well done.--*The Quarterly Review of Biology* As the Pacific Coast intertidal zone undergoes increasingly profound changes, knowing the sentinel invertebrates can foretell the future of the sea, and hence, of our species. Jim Carlton's hefty new update of *The Light & Smith Manual*, the comprehensive compendium of who's who between the tides, is the best and quickest way to do so.--Elliot A. Norse, President, Marine Conservation Biology Institute This much-anticipated modernization of Light's Manual is an astonishing accomplishment, blending state-of-the-art taxonomy with profusely illustrated and user-friendly keys to who's whom on marine shores from its stated boundaries of mid-California through Oregon, and clearly, much further north. It's also an informative, well referenced read. Marine biologists should not leave home without it.--Robert Paine, Professor Emeritus of Biology, University of Washington At this time of environmental change and loss of biodiversity, species identification has never been more important. The fourth edition of Light and Smith is more than just a field guide--it is a masterwork of research and description with a strong focus on morphological detail. No other book has such a broad scope, newly expanded to include even the most obscure taxa. The revised keys and beautiful anatomical illustrations make this classic guide more indispensable than ever. As taxonomists become extinct, there are fewer students to receive the vast body of knowledge accumulated

by generations of careful study. I hope that the beauty and depth of this guide will inspire a generation of young scientists to continue this critical taxonomic work. It will have a place of honor in all marine labs.--Paul K. Dayton, Scripps Institution of Oceanography
