CONCEPT: This algebra workbook has a creative twist:

A picture of a Cuddly Bear is used in place of a boring old X for the unknown. The idea behind adding this artistic touch to the equations is to help make algebra seem a little more fun and enjoyable. Students don't need to draw bears in their solutions, though - they can write X if they want. However, there is an opportunity for students to be creative - for example, they could draw smiley faces instead of X's.

INSTRUCTION: The staff at Al-Bear Einstein developed a concise, one-page introduction to each chapter that explains what to do in simple terms and provides an instructive example to serve as a guide. The description emphasizes the underlying concept, like dividing both sides by the same number. The material is presented in stages: A new technique is introduced in each stage, allowing students to focus on and master one idea at a time. Review sections help to reinforce the older material and force students to learn when to apply the various techniques.

The Cuddly Bears drawn by artist Bearlyn help to engage student interest and make the learning process fun.

STRUCTURE: This workbook offers plenty of practice applying basic algebra skills to solve equations.

The problems start out simple, like $X + 4 = 12$, and progressively advance, culminating in equations like $3X + 8 = 9X - 16$ (but with Cuddly Bears instead of X's). The problems are written in a large font.

the workbook. LEVEL. This workbook focuses on basic algebra skills. No prior experience with algebra is needed. The goal is to learn how to solve for one unknown in a linear equation using basic arithmetic operations. All of the answers are positive integers. There are no fractions. All of the problems can be solved without a calculator with elementary arithmetic with the numbers 1 thru 9. This way, students can focus on the main idea without distracting complications. CONTENTS: The stages of this workbook are presented as follows: This workbook begins with simple equations that can be solved with a single arithmetic operation, like adding a constant to both sides. Each of the first four sections focuses on a different operation. This allows students to master one technique at a time. A review section mixes the four operations together. The next section combines operations together. For example, it may be necessary to first subtract a number from both sides and then divide both sides by a number. Students next learn how to add the unknown to both sides of the equation in order to solve the problem. The last section offers ample practice with equations of the form $3X + 8 = 23 - 2X$. Students must add or subtract both constants and unknowns to/from both sides of the equation in order to solve these problems.

This book explores the characteristics of inflations, comparing historical cases from Roman times up to the modern day. Elapsed Time Workbook contains lessons and exercises suitable for grades 3 and 4. The first lesson, "How Many Hours Pass", uses a number-line diagram to help students figure out how many complete hours pass from one given time to the other, including if there is a change from AM to PM. The lesson "How Many Minutes Pass?" encourages students to use a practice (analog) clock or visualize the minute hand moving along the clock face to figure out the elapsed time. It also explains the subtraction method for easy time intervals. The next two lessons about calculating elapsed time emphasize dividing a time interval into parts that are easily calculated. For example, to find the elapsed time from 10:30 AM to 7:00 PM, the student learns to find the elapsed time from 10:30 AM to 12:00 noon, and then from 12:00 noon to 7 PM. The same principle is followed when the time-interval seems more complex. Lastly, the lesson "Elapsed Time or How Much Time Passes", introduces the concept of adding or subtracting hours and minutes vertically in columns.

Perfect for fans of *Moneyball* and *The Book of Basketball*, this vivid, thoroughly entertaining, and well-researched book explores the NBA's surge in popularity in the 1970s and 1980s and its transformation into a global cultural institution.

Far beyond simply being a sports league, the NBA has become an entertainment and pop culture juggernaut. From all kinds of team logo merchandise to officially branded video games and players crossing over into reality television, film, fashion lines, and more, there is an inseparable line between sports and entertainment. But only four decades ago, this would have been unthinkable. Featuring writing that leaps off the page with energy and wit, journalist and basketball fan Pete Croatto takes us behind the scenes to the meetings that lead to the monumental American Basketball

Association–National Basketball Association merger in 1976, revolutionizing the NBA's image. He pays homage to legendary talents including Julius "Dr. J" Erving, Magic Johnson, and Michael Jordan and reveals how two polar-opposite rookies, Larry Bird and Magic Johnson, led game attendance to skyrocket and racial lines to dissolve. Croatto also dives into CBS's personality-driven coverage of key players, as well as other cable television efforts, which launched NBA players into unprecedented celebrity status. Essential reading whether you're a casual or longtime fan, *From Hang Time to Prime Time* is an enthralling and entertaining celebration of basketball history.

A multiplication table is provided for students who are not yet fluent with their division facts.

100 days of practice counting money, learning fractions, and telling the time. Three core areas of math that students often need additional help to master. Start by counting groups of coins that have a value of a dollar or less. Slowly learn to count greater amounts of money that include small and large bills too. Add and subtract values, and even learn to make change. Learn fractions one step at a time. Start with simple fractions and eventually learn to add and subtract mixed numbers. Telling the time is one of the more difficult concepts for children to learn. Gradually progress from learning to tell hours, to quarter hours. Eventually tell time in five minute and minute increments. This is a great workbook to start out with. Most students will grasp the concepts within each of the three sections. If a student still needs more practice, Humble Math has workbooks that provide additional practice for these concepts too.
